

The acronym 'RTSJ' in a bold, yellow, sans-serif font, centered within a dark blue square with a thin black border.

### The solution for real time embedded Java

For those customers that need Java execution environments with a high degree of deterministic behavior, so that they can predictably execute multi-threaded Java applications and significantly reduce unpredictable effects of the garbage collection, Acsys can provide Java execution environments compliant with the [Real Time Specification for Java \(RTSJ\)](#) as defined by JSR-1 and JSR-282.

**ac6-tools** distributes a complete [Java solution](#) from Apogee, who is presently the only provider of [Java runtime environments](#) that offers the CDC-J2ME-compatible JREs officially certified as compliant with the latest specification of RTSJ.
