RTSJ

The solution for real time embedded Java

For those customers that need Java execution environments with a high degree of deterministic behavior, so that they can predictably execute multi-threaded Java applications and significantly reduce unpredictable effects of the garbage collection, Ac6 can provide Java execution environments compliant with the Real Time Specification for Java (RTSJ)as defined by JSR-1 and JSR-282.

ac6-toolsdistributes a complete Java solutionfrom Apogee, who is presently the only provider of Java runtime environments that offers the CDC-J2ME-compatible JREs officially certified as compliant with the latest specification of RTSJ.
