

The solution for real time embedded Java

For those customers that need Java execution environments with a high degree of deterministic behavior, so that they can predictably execute multi-threaded Java applications and significantly reduce unpredictable effects of the garbage collection, Ac6 can provide Java execution environments compliant with the <u>Real Time Specification for Java (RTSJ)</u>as defined by JSR-1 and JSR-282.

ac6-toolsdistributes a complete <u>Java solution</u>from Apogee, who is presently the only provider of <u>Java runtime</u> <u>environments</u> that offers the CDC-J2ME-compatible JREs officially certified as compliant with the latest specification of RTSJ.
