

Your Complete Source for Embedded Linux Development

Ac6 and Timesys join forces in France

We propose a new commercial Linux solution that provides everything needed to build, test and optimize your own Linux distribution for your processor, using LinuxLink™ from TimeSys.

This innovative service for embedded systems can be used directly from your favorite web browser and gives you access to a permanently updated repository, including the latest developments and enhancements from the Linux community and the chip manufacturers.

LinuxLink deliver subscription-based access to:

- hundreds of cross-compiled packages optimized and tested on reference boards from leading semiconductor manufacturers,
- a processor-optimized cross-development environment,
- participation in the Developer Exchange, which provides interactive support from ac6-linux, TimeSys, semiconductor companies, and industry experts in the Open Source community.

LinuxLink subscriptions are available at very attractive prices, starting at 400€ for one month. The optional Developer Suite upgrade gives LinuxLink subscribers access to sophisticated Eclipse-based development, test and build systems developed by TimeSys to speed and simplify efforts to create a commercial-grade custom Linux platform, thus providing you the most complete and efficient offer on the market.
