LinuxLink Developer Edition

Develop On Your Terms.

The 12-Month Developer Edition bundles a one year *LinuxLink by TimeSys™*subscriptionwith the *Developer Suite*upgrade.

With the 12-Month Developer Edition, a single user gets:

- Developer Suite, a kernel and filesystem configuration and customization tool that supports multiple filesystem formats and simplifies package size, content, and dependency optimization
- Hundreds of cross-compiled packages optimized and tested on your reference board
- Support for development on a target or a Windows or Linux host
- Eclipse and CDT-based Integrated Development Environment (IDE)for kernel and application development, deployment, and debugging from Linux and Windows hosts
- Package development tools that make it easy to build new and existing Open Source packages
- A test execution and development frameworkwith a bundled collection of over 2,200 Linux system testsfor uptime and functional testing and verification
- Online platform build and design tools that simplify commercial-grade, custom Linux platform development with a small footprint (uclibc) or full-feature C library (glibc) and automate Linux distribution to your customers
- An online, secure, and private source code repository for custom development projects that may not be Open Source, but which you want to integrate into your Linux distributions
